

HireHub - Day 2 Learning Notes

Empty Saved Jobs

Used a ternary: if savedJobs.length is 0, show 'No Saved Job'; otherwise map the saved jobs.

```
savedJobs.length === 0 ? ... : savedJobs.map(...)
```

Bootstrap row

A row holds Bootstrap columns. Bootstrap uses 12 parts. g-3/g-4 adds spacing.

```
row -> columns -> content
```

Search state

Stored the user's current search text in state.

```
const [jobSearched, setSearchJob] = useState("");
```

onChange

onChange runs as the input changes. e.target.value gives the current input value.

```
onChange={(e) => setSearchJob(e.target.value)}
```

filter()

filter() checks each job. true keeps it in the new array; false leaves it out. It does not modify the original jobs array.

```
jobs.filter((job) => { ... })
```

includes()

Checks whether an exact sequence of characters occurs inside a string.

```
"Frontend Developer".includes("Front") // true
```

Case-insensitive search

Converted both strings to lowercase before comparing.

```
job.title.toLowerCase().includes(jobSearched.toLowerCase())
```

Filtered display

Mapped filterJob instead of jobs. An empty search matches all titles because every string includes an empty string.

```
filterJob.map((job) => ...)
```

No results

When filterJob.length is 0, display 'No Such Job Available'.

```
filterJob.length === 0 ? ... : ...
```

Job type state

Stored the selected job type in state.

```
const [jobType, setJobType] = useState("all");
```

select + onChange

Used e.target.value to get the selected dropdown option.

```
onChange={(e) => setJobType(e.target.value)}
```

matchesType

It is true if All Jobs is selected OR the current job's type matches the selected type.

```
const matchesType = jobType === "all" || job.type === jobType;
```

Combining conditions

A job stays in filterJob only when both search and type conditions are true.

```
return matchesSearch && matchesType;
```

Search/filter UI

Placed search and dropdown in the same Bootstrap row: col-md-8 + col-md-4, with g-3 spacing.

```
row g-3 -> col-md-8 + col-md-4
```

Concepts practiced

useState, onChange, e.target.value, filter(), includes(), toLowerCase(), ternary, &&, ||, select/option, Bootstrap grid.
